

Miflex continues to develop new high quality specialist products for the diving industry –

with the assistance of highly experienced and renowned divers around the world, bringing more innovation and improving safety for every diver.

Offering 100% quality – and testing to every product, as you would expect from **Miflex**, the introduction of the **Miflex Xtreme-hi** range of diving hoses brings clear benefits when compared to traditional HP hoses to suit the majority of divers requirements.

“A Revelation in diving hoses”

We have listened to our customers, who have used our range of Xtreme medium pressure hoses and sought their views and input on what they would like from a high pressure hose and then we have made it !

Features and benefits include:

Slim-line & Lightweight design - Approximately 60% lighter than traditional HP hoses.

Burst Pressure in excess of 2,000 bar - Improving divers safety is a key objective of **Miflex** and by increasing the burst pressure of the high pressure hose to this new level, this offers divers confidence and assurance of the best possible quality from **Miflex**.

Improved Flexibility, Even Under Pressure -

Trying a **Miflex Xtreme-hi**, is the key to seeing the difference for yourself.

High Abrasion Resistance - Manufactured with materials selected specifically to add strength and reduce weight that react well under diving conditions.

100% Italian Manufactured Product - All the components have been designed and produced in Italy, aiming to achieve the best possible quality.

Xtreme quality as always from Miflex - We only wish to develop and produce the highest quality of products for today's market and we are always looking to ensure the quality with each and every hose individually and automatically tested on the production line to ensure our high standards and consistency of manufacturing.

At **Miflex**, we believe in safety and best practice when changing any hoses, this should be carried out by a competent person and if you are unsure or require assistance, we suggest you contact your local dive store and/or service centre.

An important part of this safety process is selecting the correct length hose for your use and ensuring that it is fitted and attached to your equipment correctly and due to the increased flexibility we recommend this is checked before diving, so to add to your safety.

Miflex Xtreme-hi hp hoses are available from stock in six standard lengths; 15cm, 60cm, 75cm, 80cm, 90cm & 100cm all in our branded dry-bag packaging.
